

## Course Syllabus for DAUSY National Ph.D. Program in Autonomous Systems (year 2023-24)

<b>Course title</b>	Game Theory for Controlling Autonomous Systems
<b>Scientific Discipline Sector</b>	ING-INF/04
<b>Hours of instruction</b>	20 hours
<b>CFU</b>	2 CFU
<b>Semester, period</b>	June-July 2024
<b>Goal</b>	This course is designed to provide PhD students with the necessary modeling and methodological tools for analyzing and designing algorithms to solve game equilibrium problems. The course will include lectures, numerical examples, simulations, and analysis of case studies.
<b>Syllabus</b>	<ol style="list-style-type: none"> <li>1. Introduction and motivation</li> <li>2. Background <ol style="list-style-type: none"> <li>a. Convex Optimization: Convex sets and functions. Set-valued mappings. Normal cone and tangent cone operators. Projection and proximal operators. Lagrangian duality and KKT conditions.</li> <li>b. Monotone Operator Theory: Fixed points, zeros, and contraction mappings. Averaged and nonexpansive mappings. Fixed point theorems and algorithms.</li> </ol> </li> <li>3. Nash equilibrium <ol style="list-style-type: none"> <li>a. Background, Nash equilibrium problem and best response mapping.</li> <li>b. Applications and models: Linear complementarity problems and variational inequalities.</li> <li>c. Existence and uniqueness of equilibria.</li> <li>d. Algorithms.</li> </ol> </li> <li>4. Generalized Nash equilibrium <ol style="list-style-type: none"> <li>a. Background, Generalized Nash equilibrium problem.</li> <li>b. Applications and models: Quasi-variational inequalities and mixed complementarity problems.</li> <li>c. Existence and uniqueness of equilibria.</li> <li>d. Algorithms.</li> </ol> </li> </ol>
